Clinical Image

Description

A 45 years old lady presented with complains of skin thickening, severe reflux dyspepsia, Raynaud's phenomena and past history of gangrenous auto-amputation of right middle finger. Evaluation revealing sclerodactyly, palmar cutaneous telangiectasia, radiological evidence of calcinosis and esophageal stricture on gastrointestinal endoscopy. She was diagnosed as a case of CREST (Calcinosis, Raynaud's phenomenon, Esophageal dysmotility, Sclerodactyly, and Telangiectasia) syndrome.

A case of CREST syndrome with palmar cutaneous telangiectasia (A), gangrenous amputation of distal phalanx of right middle finger (B) and calcinosis (C).
